

Asset Management

- 👉 **GIS Monitoring:**
Real-time tracking and mapping of assets.
- 👉 **Predictive Maintenance:**
AI-driven insights for proactive maintenance.
- 👉 **Cloud-Based Reporting:**
Centralized data storage and access.

Issue Detection & Response

- 👉 **Real-Time Data Analytics:**
Instant analysis for identifying issues.
- 👉 **AI Predictive Diagnostics:**
Early detection and resolution of potential problems.

Built Prototype

Financial Automation

- 👉 **Automated Billing:**
Seamless billing processes integrated with accounting systems.
- 👉 **Secure Payment Integration:**
UPI, net banking, and card payments with advanced security measures.

Inventory Management

- 👉 **AI-Powered Forecasting:**
Predictive analytics for demand forecasting.
- 👉 **Dynamic Inventory Control:**
Automated adjustments based on real-time data.
- 👉 **Voice-Assisted Interface:**
Multilingual voice support for ease of use and Pan India Accessibility

TECHNICAL APPROACH

Customer Segments

- Panchayats (GPs)
- Public Health Engineering Department (PHED)
- Residents of Rural Areas
- Water Supply Contractors
- Government Bodies

Cost Structure

- R&D costs
- Production costs
- Marketing and sales
- Operational expenses

Key Partners

- Panchayats and Local Governments
- PHED
- Device Manufacturers
- Payment Gateway Providers
- Cloud Service Providers

Revenue Streams

- Subscription fees
- Device sales
- B2B partnerships
- Data analytics services

Key Activities

- Platform development
- Asset tracking and GIS mapping
- Inventory management
- Billing and payment integration

Value Proposition

- Optimized water management
- Enhanced transparency
- Cost-effective
- Seamless payments

Cost Structure

- R&D costs
- Production costs
- Marketing and sales
- Operational expenses

Channels

- Online platform
- Mobile app
- Payment gateways

Strengths

- GIS asset tracking
- Inventory management
- Automated billing and payments
- Data transparency
- User-friendly design

Opportunities

- Expansion into underserved rural and urban regions
- Smart city partnerships
- Leverage AI/IoT
- Government Policies and Funding

Target Audience

- Gram Panchayat 🏠
- Local Citizens 👨👩
- Environmental Organizations 🌱
- Water Supply Engineers 🔧
- Financial Auditors 📊

1 Predictive Maintenance and Real-Time Monitoring
AI-driven predictive analytics streamline water management processes, reducing downtime and operational costs.

2 Automated Billing and Inventory Forecasting
Automated billing systems and machine learning forecasting minimize expenses and optimize resource utilization.

3 Sustainable Water Management
Geo-tagging and Asset management promote sustainability by detecting issues early and reducing environmental impact.

4 User-Friendly Decision-Making Tools
Intuitive UI and multi-language support empower local authorities with easy-to-use tools for improved service delivery.

5 Inclusive and Accessible Interface
Localized language support and cross-platform UI ensure accessibility for all users, including rural areas.
